Dear Mr. / Ms.,

I lived in Germany for the Erasmus program for 2021/2022 academic year. Two semester I studied electronics and computer science at the RWU. I study electrical and electronics engineering in Marmara University.

During my academic career, I have completed numerous coursework in electrical and embedded systems. I learned basic subjects such as electrical circuits, electronics, communications, digital circuit design, embedded systems. These subjects allowed me to improve my knowledge in electrical and electronic engineering. During my projects I have worked with programming languages such as C, Python, OpenCV, VHDL, MATLAB, Simulink, Assembly, Embedded c, LabVIEW, and Verilog HDL. I am currently working about Reinforcement Learning. By attending workshops and online courses in various fields, I have been able to deepen my knowledge in different aspects of engineering.

Since my studies, I have always enjoyed working in a challenging environment where I can discover and learn new things. Living with people from different countries has helped me to improve my intercultural communication. I participated in mentor-mentee programs to see a new and different perspective through the ideas of an experienced person. The mentor-mentee project and the experiences of my mentors have been very important in shaping my professional life. This semester, I will take my last three courses to complete my bachelor education. I also want to do my internship and enter the business life. Your company was the first company I visited when I started my university and I had the chance to observe your working environment. For this reason, I would like to participate in this internship program.

Kind regards.

Ms. Emine Selin Başbağ
